

## Trust for Advancement of Agricultural Sciences (TAAS)

### Interaction of Dr. R.S. Paroda with QUAD Fellows

The Quad Fellowship is a new initiative of the governments of Australia, India, Japan, and the United States designed to build ties among the next generation of scientists and technologists. Quad Fellows wish to have a significant impact throughout their lifetime and are curious how to do this effectively. All of the fellows are impact focused and care about work both interdisciplinary (across different scientific disciplines) and cross-cultural collaboration. Currently 100 fellows are placed in different universities in the US preparing for their graduate and Ph D programs.

Dr Paroda had been approached by the QUAD management to interact and share his lifetime experiences. Relating to his contributions and both challenges and successes. Accordingly, he addressed the Quad fellows on 16<sup>th</sup> August 2023 and answered their queries. He shared his brief biodata, a short film and an article in 'Agriculture Today', which was circulated among the QUAD fellows just to acquaint them about his background, so that they may frame relevant questions.
